An interesting memoir, including some famous forensic work in Russia and South America

By doc peterson

I am fascinated by forensic anthropology - had I met the venerable Dr, Charney earlier in my studies as an undergrad, I suspect my choice of careers would have taken a different route. Dr. Maple's *_Dead Men Do Tell Tales_* reads like a memoir, as the emeritus professor at the University of Florida and retired curator of the C.A. Pound Human Identification Laboratory retells several of the more tantalizing cases he's worked on as a forensic anthropologist.

Dr. Maple comes across as a bit prickly, a strength in his writing, I think as it reflects his personality. Not one to suffer fools and a scientist driven to find the truth, his work on both famous cases (such as the identification of the Romanov family in the early 1990s, the analysis and identification of Francisco Pizarro and the exhumation of President Taylor to determine if his death was the result of arsenic poisoning) as well as local murders are equally interesting. The recounting of his work makes up the bulk of the book, but more attention is given to the bureaucratic obstacles and issues faced than a detailed explanation of the forensic tools and analysis that were used to concede the cases. For example, his discussion of the Central Identification Laboratory in Hawai'i (CILHI) - where the remains of American POWs from Vietnam are examined and identified - was both a bit long and bureaucratic for my tastes.

The case that I found most interesting wasn't one that was likely to make international news, but it certainly demonstrated the skill, science and art of forensic anthropology. The Meek-Jennings case involved not only a destroyed crime scene (all the forensic evidence - literally hundreds, maybe thousands of small bone fragments as well as other detritus were scooped up and jumbled together in a plastic bag), but also a complicated mystery and possible connection to a double-murder at the other end of the country. Certainly a once-in-a-lifetime case (and a case that could make or break a career), for me, it was the highlight of the book.

Simply put, there are better books on the subject, hence the mediocre review. If you are interested in memoirs of this ilk on this subject, I recommend *Death's Acre: Inside the Legendary Forensic Lab the Body Farm Where the Dead Do Tell Tales* or *Bones: A Forensic Detective's Casebook* by Ubelaker, Douglas Dr., Scammell, Henry (2000) Paperback. For more on the development of forensic anthropology as a science, I

recommend *The Killer of Little Shepherds: A True Crime Story and the Birth of Forensic Science*.

Meh. It was okay

By N.M. Cox

This book was okay but not as interesting as I had hoped so I'm kinda bummed out about the amount of money I spent. There are parts that were pretty interesting but few and far between. A lot of time is spent detailing how the laboratories are set up, the tools, etc. I'm sure this is interesting to some but it wasn't to me. I really wanted to read about actual cases and there is many of them here but again, we read all about how the laboratories are set up and that takes up a lot of space in each case. Really, it's not a bad book at all, just not what I expected nor wanted.

Tales for more than the dead

By Amy Raduege

As someone who studies folklore about the dead, it is immensely valuable to gather as much information as possible about the reality of death. It is a rare thing to encounter a book about science and scientific procedure that is as accessible as this one, however, or one that shows as much respect for the dead. From anonymous soldiers of Vietnam to the Romanovs, *_Dead Men Do Tell Tales_* explains the power and the relevance of forensic anthropology not just to history, but to humanity.
