Great book for starters

By Daniel Ferreira

If you want to learn ceramics, either you buy an excellent book which covers everything -- or almost -- or you buy a book devoted to each subject, whether it is pinching, slab construction, throwing, firing, glazing, or whatever. And even in each subject you will find several books which complement each other. Now, I hate that, because since I was a university student, I hate the flood of technical books on the same subject, which are nothing but copies of each other. That's why I always look for classics on each subject.

Considering the books I've already read, I dare to say that this book is indeed a classic. You won't find here inspiration on form or decoration, because it's not the purpose. This book it's about flawless handbuilding, with unmatched detailed step-by-step instruction, amazing cutaway photos, and terrific advice to get your job done while avoiding common mistakes that would destroy your work in progress.

Surely you will find always something missing but you'll find a lot more missing in all other books.

If you are interested in serious handbuilding, get this book. Then, you have plenty of others on various handbuilding methods for inspiration on form and decoration.
