"The Dogon creation myth reflects the nuances of cutting-edge scientific cosmology, and finally this is being recognized. A quintessential read for anyone wishing to learn the truth about this fascinating subject."

--Andrew Collins, author of *From the Ashes of Angels*

The Dogon people of Mali, West Africa, are famous for their unique art and advanced cosmology. The Dogon's creation story describes how the one true god, Amma, created all the matter of the universe. Interestingly, the myths that depict his creative efforts bear a striking resemblance to the modern scientific definitions of matter, beginning with the atom and continuing all the way to the vibrating threads of string theory. Furthermore, many of the Dogon words, symbols, and rituals used to describe the structure of matter are quite similar to those found in the myths of ancient Egypt and in the daily rituals of Judaism. For example, the modern scientific depiction of the unformed universe as a black hole is identical to Amma's Egg of the Dogon and the Egyptian Benben Stone.

The *Science of the Dogon* offers a case-by-case comparison of Dogon descriptions and drawings to corresponding scientific definitions and diagrams from authors like Stephen Hawking and Brian Greene, then extends this analysis to the counterparts of these symbols in both the ancient Egyptian and Hebrew religions. What is ultimately revealed is the scientific basis for the language of the Egyptian hieroglyphs, which was deliberately encoded to prevent the knowledge of these concepts from falling into the hands of all but the highest members of the Egyptian priesthood. The *Science of the Dogon* also offers compelling new interpretations for many of the most familiar Egyptian symbols, such as the pyramid and the scarab, and presents new explanations for the origins of religiously charged words such as Jehovah and Satan.

A look at the close resemblance between the creation and structure of matter in both Dogon mythology and modern science

- Reveals striking similarities between Dogon symbols and those used in both the Egyptian and Hebrew religions
- Demonstrates the parallels between Dogon mythical narratives and scientific concepts from atomic theory to quantum theory and string theory

The Dogon people of Mali, West Africa, are famous for their unique art and advanced cosmology. The Dogon's creation story describes how the one true god, Amma, created all the matter of the universe. The Science of the Dogon offers a case-by-case comparison of Dogon descriptions and drawings to corresponding scientific definitions and diagrams from authors like Stephen Hawking and Brian Greene, then extends this analysis to the counterparts of these symbols in both the ancient Egyptian and Hebrew religions. Worth Reading

By SamMadHands

While abed with that cough everyone had in February, I couldn't do much but watch Netflix and Hulu Plus, where I found a short but startling series called "The Pyramid Code." Now, I've always hated the Von Danikens and Ancient Aliens Guys because even if their conclusions should somehow happen to be true, they have no sense of what is and what isn't evidence, their arguments are invalid, and they can't make their predicates and subjects agree. Also, I've always felt with Zahi Hawass that to claim that extraterrestrial help was needed to build the Pyramids is to demean HUMAN intelligence. (After all, it was the Stone Age, not the Stupid Age.) But "The Pyramid Code" introduced me to geological, astronomical, mathematical, electrical, and linguistic arguments that were actually ARGUMENTS, and so fact-based they made the orthodox narrative look like fabrication. So, since I was too sick to walk to the library, I ordered this e-book and read it within a few hours, thus enjoying both an immediacy of gratification and a remarkable hypothesis which, true or not, is both entertaining and worth entertaining. I'd recommend it to anyone who prefers their spookiness backed up by facts, not by wild speculation. In fact, this particular hypothesis is always welcome at my gatherings, because he is not only entertaining, but also very civil when hanging out with hypotheses that contradict him.
